Josef Síkela

Minister of Industry and Trade
of the Czech Republic

Ladies and gentlemen,

I am delighted to have the opportunity to share my views about our mission to the United States and Canada and about the Czech Business Delegation that will join us. This journey marks a significant milestone; bringing together not only the largest business delegation ever organized by the Ministry of Industry and Trade of the Czech Republic, in collaboration with the Czech Confederation of Industry, but also the largest startup delegation coming from the Czech Republic so far.

Our delegation represents a diverse array of skills and competencies, including startups, scaleups, and companies specializing in health and bio tech. As we traverse through global cities of Boston, Toronto, Chicago, and Seattle, our primary aim is to cultivate stronger ties and explore new avenues for economic collaboration between our nations and businesses.

Throughout our mission, we will engage in constructive dialogues with influential stakeholders, government officials, and business leaders. The goal of the Ministry of Industry and Trade is to provide opportunities for that engagement and to assist in strengthening business ties.

With a delegation comprising driven entrepreneurs, innovative thinkers, and industry experts, we are poised to seize upon investment opportunities, establish strategic alliances, and drive positive change in the challenging global business landscape.

In conclusion, we are confident that our journey to the United States and Canada will yield fruitful outcomes, fostering enduring relationships and opening doors to exciting new ventures. We extend our best wishes for success to all participants and look forward to forging lasting connections.

I wish you the best of success in your endeavors.

Jan Rafaj

President of Confederation of Industry
of the Czech Republic

Dear Partners,

It is a great pleasure for me to address you on behalf of the Confederation of Industry of the Czech Republic organizing the business mission accompanying the Minister of Industry and Trade of the Czech Republic, H.E. Mr. Jozef Síkela, on his visit to the United States of America and to Canada. The business delegation represents companies and institutions which already have their business partners and projects underway here, as well as those eager to explore new opportunities for business and investment in both countries.

In our pursuit of forging lasting partnerships and unlocking new opportunities, we present a diverse array of Czech enterprises renowned for their excellence, innovation, and commitment to quality. The participants in our delegation come from startups, scaleups, innovative businesses and universities in various sectors including ICT, emerging technologies, health and biotech, smart manufacturing, cyber security, IT solutions. Due to the industrial tradition and technological inventiveness, Czech companies are among the best in the world and can offer globally competitive products and services.

We are confident that this mission will make a significant contribution to the economic ties between the Czech Republic and North America. Through productive dialogue and cooperation, we can explore new avenues for investment, trade, and collaboration that can benefit all parties involved. I am very pleased that the Confederation of Industry of the Czech Republic can assist you in finding new partnerships and shared projects and wish you many successful business meetings!

Company activities, products and services:

The European Union and Foreign Trade Section at the Ministry of Industry and Trade is primarily responsible for bilateral economic relations, trade policy both on bilateral and the EU level, support and promotion of Czech businesses abroad, including through the Ministry's export promotion agency CzechTrade. We help Czech businesses and investors and companies interested in the Czech Republic with entering the market, be it the EU internal market, overseas or reconstruction of Ukraine. Furthermore, we organize intergovernmental committees, business seminars, outgoing and incoming trade missions, participation in international shows and fairs, as well as overall support of individual B2G and B2B projects.

The Economic Section of the Ministry of Industry and Trade provides economic analyses and forecasts, oversees the state-owned enterprises under the Ministry and focuses on project management, including the preparation of the new Economic Strategy of the Czech Republic. The Economy Strategy will focus on streaming more investment into the Czech economy across all its sectors, including science, innovation and education. It will also promote active economic cooperation on the EU and bilateral level, as well as economic security.

Established: 2017

Employees: 105

Annual turnover in USD: 6.5M

AIKIT Digital is a full-service IT company, providing customized IT solutions and support for large-scale systems and software development. Our team of top developers and consultants, located across the Czech Republic (Prague, Mladá Boleslav, Brno), Portugal (Lisbon) and the USA (New York), assists major technology companies – from corporations and SMEs to startups – to implement projects with a global impact. We plan to expand further, with a branch opening in Germany in 2024.

Our expertise empowers businesses by:

Automation in Manufacturing: We optimize production processes through innovative solutions.

Robotics: We integrate robotic systems to enhance efficiency and precision.

Artificial Intelligence: We leverage AI to unlock valuable data insights and drive intelligent decision-making.

Predictive Maintenance: We utilize data analysis to predict and prevent equipment failures, maximizing uptime.

Beyond implementation and development, we offer robust service support, with a proven track record of achieving high SLAs (guaranteed uptime of 99.95%).

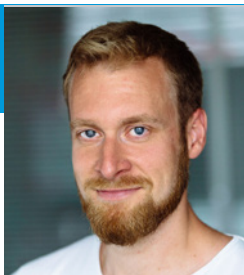

Since 2023, AIKIT Digital has been a strategic partner with Škoda Auto University, shaping an independent study program focused on industrial automation and robotics. This program equips students with skills in programming industrial control systems, utilizing machine-learning tools, and fostering innovation in the automotive industry.

Tech team scaling is a proven strategy & enabler of successfully delivered projects

We will cover your expansion to the new location and be your partner in hiring/recruiting, operations & people management. Once we build the new entity, we will operate it for you until the time you feel comfortable taking it over, we will transfer it. We will always advise you on what we think is the best; however, the final decision will always be yours. Our turnkey solution will enable you to grow as you go with no need to hire other vendors as all the competence & know-how, including legal, compliance, payroll, etc., is in-house.

The location/market of CEE offers a great combination of the unique skillset of IT professionals, reasonable salaries, and the US entrepreneur mindset (small teams with a high impact).

The main benefits are:

You have the desired team 6 months earlier than when your company would do it independently.

Lowering risks such as fine-tuning the right hiring strategy or understanding local regulatory & compliance conditions.

We are a company that has long been dedicated to the meaningful employment of people with disabilities, particularly in the area of application development. By working with people with specific disabilities (such as autism, ADHD, dyslexia, and others), we are able to deliver projects that are too difficult for people without specific disabilities. In this way, we strive to turn disabilities into superpowers and redefine the paradigm of employing people with specific needs. These capabilities enable us to deliver unique solutions, particularly in the energy, logistics and security sectors.

Examples of some of our solutions:

- system for smart management of field workers (energy, building management, logistics)
- applications for trading and capacity management of gas storage and critical infrastructure
- automation and evaluation of security camera footage, sensors and interfacing with other data

We are Justmighty, a company that has been caring for the brands and marketing of our clients from the Czech Republic and other countries for 11 years. Our services include a wide range of activities: from creating comprehensive marketing and communication strategies, through the design of corporate visual identities, to the development of websites. In addition, we devise and create major marketing campaigns and ensure regular content. Our goal is for the creativity which always perfectly represents our clients and helps to build their brand in the digital world. We believe in the power of creativity and innovation, which we bring to all our projects, so our services constantly exceed our clients' expectations and assist them in achieving extraordinary results.

MAIA - Medical AI Assistant is a European MedTech startup of the year that offers an end-to-end healthcare solution based on AI. Our hardware can be connected to any endoscopic tower, and our real-time AI assists physicians during procedures, thereby enhancing the quality of examinations. We save physicians more than 20% of their time, improve the quality of examinations, and digitize administrative processes that would otherwise be performed by medical staff. MAIA eliminates human error and can reduce the size of the resulting record by up to 70% with our special compression technology. Our unique solution is highly valued by experts in the field.

MEBSTER is an R&D company in the field of human biomechanics and specializes in developing medical care solutions, particularly assistive technologies for individuals with lower limb paralysis, including those recovering from spinal cord injuries. Their flagship product is the UNILEXA passive exoskeleton, designed to enable individuals with partial or complete loss of lower limb function to walk again. It is available in two versions: UNILEXA Prime 2.0, suitable for various medical care settings, and UNILEXA Home 2.0, designed for consistent daily home use. The exoskeleton incorporates embedded sensory subsystems to provide biomechanical data and, when connected to the novel MEBSTER app, aids users and professionals in monitoring progress and tracking training outcomes.

Established: 2024

Employees: 2

We offer an AI-based technology that allows users to search through company data (documents, text, images, audio, structured data) in a descriptive, human-like manner. For example, in an e-shop, one can search for “blue family car that I can take to the mountains” or “something for headaches that I can take while pregnant”, and we will understand from the context what products to show the user. Similarly, one can ask descriptive questions about internal documents, and our technology will retrieve the semantically closest results – for instance, “how do I access the Intranet when I'm not at work?” etc.

Talentpilot is a GenAI platform that empowers companies to build great teams.

Every person is unique, with their own motivations, values, ambitions, and personality. Talentpilot uses such data about individuals and puts them into the context of any company to empower every HR professional, recruiter, or manager to make the right people-related decisions.

With Talentpilot, companies:

- Hire faster with precision, resulting in a lower attrition rate
- Identify bottlenecks in their teams to increase productivity
- Develop employees based on their unique personal characteristics to support their growth
- Enhance managers' ability to lead a personalized and genuine dialog with their employees to increase engagement

GenAI revolutionizes many aspects of our lives, and we believe that how companies work with their most important asset, their people, is one of those aspects.

Annual turnover in USD: 75M

Trask is an IT consulting and delivery company, focusing on financial vertical.

We help our customers to innovate, increase revenue and optimize business through the creation of business-oriented IT solutions that are powered by innovative technology. We serve mostly large, multinational enterprise clients, but we also provide services to fintechs.

We have a broad area of expertise, but where we really differentiate on the market is our focus on three areas: Application Integration, Cybersecurity and Application Modernization.

We deliver end-to-end services from ideation, consulting and CX design to implementation, operation, long-term support and continual innovation of delivered solutions.

VisioTherapy (HealthTech) is an AI-powered mobile app that acts as your personal physical therapist's avatar, guiding you through your customized rehabilitation exercises with precision.

It promises a win-win for both physical therapists and patients. By reducing the need for in-person sessions by up to 70% and shortening treatment times by up to 50%, it offers a more efficient, effective, and patient-friendly approach to physical therapy.

What sets VisioTherapy apart is its deep understanding of the individuality of each patient. Unlike generic home exercise apps, VisioTherapy's AI-driven "Digital Twin" technology personalizes the rehabilitation experience and tailors it to each patient's unique physical capabilities. All of this is done on our secure platform without any images stored.
